To: Peter T. Fox, M.D.  
c/o Jean Hardies- Research Imaging Center-MS6240  
UTHSCSA  
From: Institutional Review Board-2  
Subject: Notice of Continuing Review Reapproval

Protocol Number: HSC20060042H  
Title: Stuttering Therapy and Neurophysiological Interaction

The Institutional Review Board-2 reapproved the above referenced protocol at a convened meeting on July 15, 2008. The consent forms approved on February 4, 2008 remain approved and do not require revision at this time. The following were submitted at the time of continuing review: progress report; Form B-2; amendment form; consent forms approved on February 4, 2008.

The amendment updating the study personnel was also approved at this time.

Your new approval period expires on August 15, 2009.

**IRB required training for researchers:** It was noted that the PI and several Sub-Investigators/Study Staff met the current investigator training requirements. The Board determined that only the investigators listed below were approved to continue to be engaged in this research study:

- Peter Fox
- Jean Hardies
- Betty Heyl
- Adam Jacks
- Robin Selman
- Matt Cykowski

**Important Note:** All investigators previously listed as engaged in research not complying with the training requirement are no longer approved to be engaged in this research study. The Principal Investigator may request these individuals be added once the training requirements have been met. *Only the investigators engaged in research covered under the UTHSCSA Federalwide Assurance have been listed.*

Under the OHRP guidance, the IRB is retaining the anniversary date as the previous expiration date plus one year. The annual continuing review for this study was performed within 30 days before the IRB approval expiration date. The Office for Human Research Protections (HHS/OHRP) recognizes the advantages of keeping the IRB approval period constant from year to year throughout the life of each project.

In order to keep your study open beyond this date, you must submit a progress report six weeks (42 days) prior to expiration.

Sincerely,

Steven Chaffin, M.D.  
Chair, Institutional Review Board-2

*Please retain this document in your IRB correspondence file*
